Performance Data:

Maximum Pulling Force:

| Grade | Rod Outer Diameter | |
|-------------|----------------------|----------------------|
| | 3/4" | 7/8" |
| DA Alloy | 36.1 klb (16.4 t) | 49.5 klb (22.5 t) |
| DS Special | 38 klb (17.3 t) | 52.1 klb (23.7 t) |
| KDS Special | 32.3 klb (14.7 t) | 44.3 klb (20.1 t) |

To prevent tensile failures, the weight indicator pull on a "like new" condition rod string should not exceed 90% of the yield strength of the smallest diameter sucker rod, based on its known size and grade. Maximum pulling force values herein informed were calculated based on the 90% of the specified minimum yield strength at the smallest section of a given rod.

Beam Pumping: Maximum allowable tensile stress

It is recommended that the modified Goodman stress diagram or the simplified formula listed bellow are used in the determination of the allowable range of stress applied to a sucker rod.

$$S_a = \frac{UTS}{A} + B * S_{min} * SF$$

Applied tensions can be compared to the maximum allowable using the Goodman formula:

$$Goodman\% = \frac{S_{max} - S_{min}}{S_a - S_{min}} * 100$$

Table 1: Goodman coefficients.

| Grade | A | B |
|-------------|---|--------|
| DA Alloy | 4 | 0.5625 |
| DS Special | 4 | 0.5625 |
| KDS Special | 4 | 0.5625 |

Where:

S_a = Maximum allowable stress (psi or Mpa)

S_{min} = Minimum calculated or measured stress (psi or Mpa)

S_{max} = Maximum calculated or measured stress (psi or Mpa)

UTS = Minimum ultimate tensile strength (psi or Mpa)

SF = Service factor. For corrosive environments a value of 0.9 is recommended

Coefficients A and B are listed on Table 1.

Progressive Cavity Pumping: Effective Stress

The effective rod stress in PCP applications can be calculated using the von Mises equation:

$$\sigma_e = \sqrt{\frac{(C_1 * L^2)}{\pi^2 * D^4} + \frac{C_2 * T^2}{\pi^2 * D^6}}$$

Where:

σ_e = Effective stress (kpsi or Mpa)

L = Total axial load (lbf or N)

T = Total torque (lbf. ft or N. m)

D = Rod's body diameter (in or mm)

C_1 = Constant (For imperial system= 1.6×10^{-5} . For international system= 16)

C_2 = Constant (For imperial system= 0.1106. For international system= 7.68×10^8)

Color Code:

Rod's ends are painted according to the following table:

| Grade | Color Code |
|-------------|------------|
| DA Alloy | Yellow |
| DS Special | Orange |
| KDS Special | Orange |

*Displayed colors are for guidance only.

Non Destructive Testing:

All raw material is carefully inspected using electromagnetic and/or ultrasonic methods to ensure the soundness of the final product.

Marking:

| Grade | New Marking | Old Marking |
|-------------|-------------|-------------|
| DA Alloy | DA | D |
| DS Special | DS | DS |
| KDS Special | KDS | KD |
