

Sucker Rod String: Sucker & Pony Rod

PDS: SRBLAR

Short Name: R06

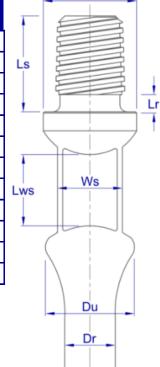

Effective Date: 16/03/2020 Previous Revision: 11/02/2017

AlphaRod® BlueRod® Sucker & Pony Rod

Dimensions:

The BlueRod® premium sucker rods are a remarkably resistant connection designed for high loads. The connection improves the rod's fatigue life and ensures excellent field performance. Flank-to-flank contact eliminates the gap existing in the conventional profile thread and increasing the interference level, thus reducing the tendency to loosen. Cut-tapered trapezium profile thread with diametrical interference reduces the pre tension in the pin make-up. Lower displacement during make-up and uniform contact between the flanks, allowing a better stress distribution and a reduction in the permanent deformations created in threads during both make-up and operation.

Nominal Size		Units	Dr	Df	Ws	Lws	DU	Lr	Ls

Sucker Rods Nominal Lengths:

25, 30 ft (7.62, 9.14 m)

Pony Rods Nominal Lengths:*

2, 4, 6, 8, 10, 12 ft (0.61, 1.22, 1.83, 2.44, 3.05, 3.66 m)

Steel Grades:

The AlphaRod® series was created to overcome more demanding requirements and offer a solution to fatigue and corrosion-fatigue problems. During oil production sucker rods face operative productions that get tougher by the day Mature conventional wells and non-conventional wells expose sucker rods in such ways that lead to an increase in premature fails. The new steel grades of the AlphaRod® generation were specially designed to satisfy these operative conditions.

Chemical Composition:

Typical chemical compositions (wt%) listed in the following table.

Grade	С	Mn	Si	S	P	Cr	Ni	Мо	Others
AlphaRod® CS	0.23	0.55	0.25	0.01 max	0.010 max	0.95	0.30 max	0.45	B: 0.01 max, Ti: 0.1 max, Nb: 0.1 max

^{*}Other lengths might be available upon request.

Mechanical Properties:

Mechanical properties are listed in the following table.

Grade	Yield Stregth (0.2% offset)	Ultimate Tensile Stress	Elongation (8")	Reduction of area	Hardness
AlphaRod® CS	Min 110 kpsi	118 to 133 kpsi	14% Min	70% Min	26 HRC
	(Min 758 Mpa)	(814 to 917 MPa)	14/0	7070 141111	2011110

Performance Data:

Maxium Pulling Force:

	Rod Outer Diameter				
Grade	3/4"	7/8"	1"		
Alaba Bad® CC	38.8 klb	52.9 klb	69 klb		
AlphaRod® CS	(17.6 Ton)	(24 Ton)	(31.3 Ton)		

Beam Pumping: Maxium allowable tensile stress

It is recommended that the modified Goodman stress diagram or the simplified formula listed bellow are used in the determination of the allowable range of stress applied to a sucker rod.

$$S_a = \frac{UTS}{A} + B * S_{min} * SF$$

Applied tensions can be compared to the maximum allowable using the Goodman formula:

$$Goodman\% = \frac{S_{max} - S_{min}}{S_a - S_{min}} * 100$$

Grade	Α	В
AlphaRod® CS	2.208	0.375

Table 1: Goodman coefficients

Where:

Sa = Maximum allowable stress (psi or Mpa)

Smin = Minimum calculated or measured stress (psi or Mpa)

Smax = Maximum calculated or measured stress (psi or Mpa)

UTS = Minimum ultimate tensile stregth (psi or Mpa)

SF = Service factor. For corrosive environments a value of 0.9 is recommended

Coefficients A and B are listed on Table 1.

Progressive Cavity Pumping: Effective Stress

The effective rod stress in PCP applications can be calculated using the von Mises equation:

$$\sigma_e = \sqrt{\frac{(C_1 * L^2)}{\pi^2 * D^4} + \frac{C_2 * T^2}{\pi^2 * D^6}}$$

Where:

 σ_e = Effective stress (kpsi or Mpa)

L = Total axial load (lbf or N)

T = Total torque (lbf. ft or N. m)

D = Rod's body diameter (in or mm)

 C_1 = Constant (For imperial system= 1.6x10⁻⁵ . For international system= 16)

 C_2 = Constant (For imperial system= 0.1106. For international system= 7.68x10⁸)

Color Code:

Rod's ends are painted according to the following table:

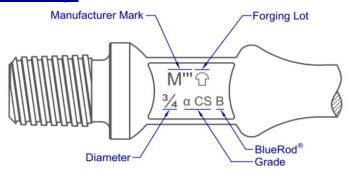

Grade	Color Code	
AlphaRod® CS	Silver	

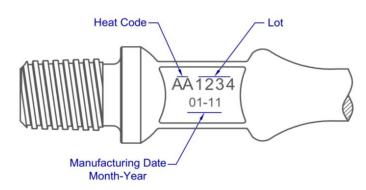

^{*}Displayed colors are for guidance only.

Non Destructive Testing:

All raw material is carefully inspected using electromagnetic and/or ultrasonic methods to ensure the soundess of the final product.
